PROFESSIONAL SUMMARY

B.Tech Second Year, Computer Science & AI/ML student with hands-on experience building full-stack MERN applications, RESTful APIs, and ML-integrated microservices. Proven ability to ship production-ready projects — including a 2-project portfolio deployed on Render with real users. Strong in scalable backend design, authentication systems, and machine learning fundamentals.

EDUCATION

Kolhapur Institute of Technology College of Engineering, Kolhapur

2024–2028

B.Tech - Computer Science and Engineering (AIML) – CGPA: 8.07

Kolhapur, Maharashtra

TECHNICAL SKILLS

- **Languages:** C, C++, Java, Python, JavaScript, SQL
- **Core:** DSA, Object-Oriented Programming (OOP), Software Design, Software Development, Problem Solving, Logical Thinking, REST API Design, API Development, Microservices, MVC Architecture, Agile, Clean Code, Code Review, Debugging
- **Web:** HTML5, CSS3, Bootstrap 5, Tailwind CSS, EJS
- **Frameworks:** React, Node.js, Express.js, Flask
- **Databases:** MongoDB (Atlas), Mongoose, SQL
- **Auth / Cloud:** Passport.js, Cloudinary, Multer, Nodemailer, express-session, Security
- **ML:** Supervised Learning, Classification, Regression, TF-IDF, Fuzzy Matching
- **Tools / Practices:** VS Code, Git, GitHub, Version Control, Docker, CI/CD, Render, Gunicorn, Mapbox SDK, Unit Testing, Software Testing, QA Validation, Performance Optimization, Automation, Documentation
- **Professional:** Communication Skills, Collaborative Mindset, Quick Learner

PROJECTS

GoTrip – Full-Stack Property Rental Platform

GitHub Live Demo

Node.js · Express.js · MongoDB Atlas · EJS · Bootstrap 5 · Passport.js · Cloudinary · Multer · Joi · Render

- Engineered a full-stack property rental platform supporting **15+ listing categories** with complete CRUD for listings and nested reviews, handling **multi-image uploads** via Cloudinary CDN — reducing perceived load time by **approx. 40%** over local storage.
- Built a secure authentication system using Passport.js + passport-local-mongoose with persistent sessions via connect-mongo, supporting **concurrent user sessions** without state loss on redeploy.
- Architected **RESTful APIs** following strict MVC separation (controllers / models / routes); enforced **dual-layer validation** with Joi schema checks and Mongoose model constraints, reducing invalid data submissions to **near zero**.
- Implemented a **GST tax toggle (18%)** on listing prices; seeded **50+ sample listings** with realistic data; deployed to production on Render backed by MongoDB Atlas.

FindMate – AI-Powered Campus Lost & Found Platform

GitHub Live Demo

Node.js · Express.js · Flask · MongoDB · EJS · TF-IDF · Fuzzy Matching · Passport.js · Cloudinary · Nodemailer · Tailwind CSS · Render

- Designed an AI matching engine combining **6 weighted signals** (TF-IDF text similarity, fuzzy location, category, color, brand, and date proximity) achieving **90%+ correct match rate** in internal testing.
- Deployed a Python/Flask ML microservice with Gunicorn, decoupled from the main Node.js app; implemented an **ML_ENABLED** feature flag enabling **zero-downtime fallback** to manual matching if the service is unavailable.
- Built an **Admin ML Dashboard** enabling reviewers to accept/reject AI suggestions with a full audit trail — reducing manual review effort by **approx. 60%** on high-confidence matches.
- Engineered **role-based access control** (RBAC) via Passport.js separating public reporter and admin workflows; triggered **automated email alerts** via Nodemailer for matches exceeding a confidence threshold.
- Scaled photo management through Cloudinary, supporting **multi-image upload per report** with CDN delivery.

CERTIFICATIONS

- Full Stack Web Development – Apna College
- DSA in C++ – Apna College
- Python Bootcamp Certificate – Code with Harry

EXTRACURRICULAR

- Rotaract Club, KIT Sunshine – Member (events, coordination, community service)
