

Yash Gaikwad

Aspiring Software Development Engineer – Full-Stack & Machine Learning

Kolhapur, Maharashtra • +91-9130031181 • yashgaikwad5516@gmail.com • [LinkedIn](#) • [GitHub](#) • [LeetCode](#)

PROFESSIONAL SUMMARY

B.Tech Third Year, Computer Science & AI/ML student who independently designs, builds, and deploys full-stack and AI-powered systems end-to-end. Portfolio spans 4 projects (~13,000 lines of code) covering property rental, AI-assisted lost & found matching, multi-source knowledge retrieval, and automated video generation; 3 built solo and deployed with real users on Vercel/Render, 1 as lead frontend contributor on a college team project. Comfortable across the stack: REST API design, authentication, relational/NoSQL databases, and applied ML including speech-to-text, embeddings, and LLM-based retrieval.

EDUCATION

Kolhapur Institute of Technology's College of Engineering, Kolhapur 2024 – 2028

B.Tech – Computer Science and Engineering (AIME) — CGPA: 8.07

EXPERIENCE

AI Web Development Intern Aug 2026 – Present

InAmigos Foundation (IAF) · Internship Kolhapur, Maharashtra, India · Remote

- Developed and maintained AI-powered web applications using JavaScript, Node.js, Express.js, and React.js.
- Worked across the frontend and backend to build responsive, user-friendly production interfaces.
- Integrated AI/ML features into web applications to enhance user experience and automation.
- Collaborated with team members on project development, testing, and deployment.
- Participated in problem-solving, debugging, and performance optimization of web applications.
- Gained hands-on experience with the software development lifecycle, version control, and agile practices.

TECHNICAL SKILLS

- Languages: JavaScript, Python, SQL
- Backend: Node.js, Express.js, Flask, FastAPI, REST API Design, MVC Architecture
- Frontend: React.js, EJS, Tailwind CSS, Bootstrap 5, HTML5, CSS3
- Databases: MongoDB (Atlas), Mongoose, SQLite
- Auth / Cloud / DevOps: Passport.js, Cloudinary, Docker, Git, GitHub Actions (CI), Vercel, Render
- Applied AI/ML: Whisper (speech-to-text), Ollama (LLM inference & embeddings), Retrieval-Augmented Generation, FFmpeg, OCR (Tesseract)
- Also familiar with (coursework / certifications): C, C++, Java, DSA, OOP

PROJECTS

GoTrip – Full-Stack Property Rental Platform (Solo Project)

Node.js · Express.js · MongoDB Atlas · EJS · Bootstrap 5 · Passport.js · Cloudinary

- Built a full-stack rental platform spanning 5 database models and 20 REST endpoints (listings, reviews, bookings, wishlists, users) across 10 listing categories, with complete CRUD workflows.
- Implemented secure Passport.js authentication with persistent MongoDB-backed sessions, and enforced dual-layer validation (Joi + Mongoose schemas) on all listing and review submissions.
- Deployed to production on Vercel (serverless) backed by MongoDB Atlas, with Cloudinary-based multi-image upload support.

FindMate – AI-Powered Campus Lost & Found Platform (College Team Project)

Node.js · Express.js · EJS · Tailwind CSS · Passport.js · Cloudinary

- Primary frontend contributor – built 25 EJS page templates (~4,400 lines) covering item reporting, browsing, authentication, profile, and admin review flows, styled with Tailwind CSS.
- Implemented Passport.js-based authentication and Cloudinary-integrated image upload flows for lost and found item reports.
- Collaborated on integrating a Flask-based AI matching microservice that scores potential matches using 6 weighted signals (description, name, category, attributes, location, date).

KnowledgeOS – AI-Powered Multi-Source Knowledge Assistant (Solo Project, In Progress)

Python · FastAPI · Whisper · Tesseract OCR · Ollama (Llama 3)

- Built a FastAPI ingestion service supporting 14 source file types (PDF, DOCX, PPTX, TXT/MD, 4 image formats, 6 audio/video formats) with OCR and Whisper-based transcription.
- Prototyped a Retrieval-Augmented Generation loop using Ollama embeddings and cosine-similarity retrieval over transcript chunks, generating LLM answers with source video and timestamp citations.

VidSnapAI – AI-Powered TikTok Reel Generator (Solo Project)

Flask · Python · FFmpeg · ElevenLabs API · SQLite · Docker

- Built a Flask app supporting image uploads up to 25MB across 4 formats, converting them into 1080×1920 vertical reels via FFmpeg.
- Integrated ElevenLabs TTS for AI voiceover generation and containerized with Docker/docker-compose, with GitHub Actions CI running the test suite on every push.

CERTIFICATIONS

Full Stack Web Development (Apna College) • DSA in C++ (Apna College) • Python Bootcamp Certificate (Code with Harry)

EXTRACURRICULAR

Rotaract Club, KIT Sunshine – Member (events, coordination, community service)
